

## RAIN GAUGE

## ABSTRACT OF THE DISCLOSURE

A rain gauge assembly includes, in an exemplary embodiment, a first hollow cylinder having a side wall and a bottom wall closing a first end of the first cylinder. The first cylinder is open at a second end. The assembly also includes a second hollow cylinder having a side wall and a bottom wall closing a first end of the second cylinder. The second cylinder is open at a second end and has an inside diameter approximately equal to the outside diameter of the first cylinder so that the first cylinder is receivable in the second cylinder. The second cylinder has a length that is less than the length of the first cylinder. The first and second cylinders are molded from a resilient translucent plastisol material. The assembly further includes a means for attaching the second cylinder to a surface.
